

## Company Introduction

### Design & R&D | Quality Assurance

#### Innovation-Driven Design & R&D

Innovation is the cornerstone of our design and R&D philosophy, driving continuous development of advanced products and tailored solutions for a more efficient future.

We partner closely with customers to deliver high-value transmission belt systems for OEM and aftermarket applications.

Our EP timing belts are engineered for extreme environments, ensuring reliable, high-performance operation. Supported by an expert team, state-of-the-art manufacturing, and a culture of continuous improvement, we optimize every stage of engineering, production, and quality to solve real-world challenges and meet diverse client needs.

#### Quality Assurance

We uphold world-class standards through multiple international management system certifications.

- Premium Imported Raw Materials
- OEM-Compliant Modern Facility
- Continuous Formula & Process Optimization – approaching global leader performance
- Synchronized Pulley & Belt Production – ensuring precision meshing
- 5S Management System – driving efficiency and consistency

We deliver reliable, precision-engineered transmission solutions trusted worldwide.
